

CLONEWORKS

THE AUTONOMOUS DIGITAL OPERATIONS LAYER

CloneWorks is building the operating environment through which a business creates, manages, and autonomously executes its digital operations — not another AI tool, but the layer where the work itself happens.

At the center is Wilson: an engine designed to understand a business and turn that understanding into execution — websites, content, brand, SEO, CRM, campaigns, and customer engagement — performed by a self-orchestrating digital workforce rather than assembled by a human operator. CloneWorks validated the model before building the platform: within 16 weeks the company onboarded paying businesses and generated revenue while building the proprietary system behind the larger vision.

TRACTION

37 Enterprise Clients	\$2,789/mo Per-Client Price	~\$85K Monthly Recurring Revenue	\$1.02M Annual Run Rate
72% Pilot-to-Paid Conversion	40% Core MVP Progress	\$1.3K-\$5.5K/mo Subscription Tiers	\$350K SAFE This Round

THE OFFER
